Photoshop has gained a powerful and flexible selection tool that allows you to perform precision selections to edit only the pixels you want. Curve adjustments have improved curve support and flexibility, giving more precision and control than ever. **Ribbon Gestures** - Ribbon gestures are the new look to the CS6 toolbox. With gestures, you can instantly create and duplicate your favorite tool panel commands, work with more drag n' drop options, and access everything in one place. Since version CS6, Multiviews have become a first class citizen in Photoshop. Multiviews may not work in every Photoshop CC project, but they're a great way to simultaneously edit or view two identical layers in Photoshop using two separate monitors. **Live Composition** - Quickly create beautiful layouts in Photoshop using a feature called Live Compose. When you're working on a file and you change an element, the changes reflect in the file. You can create transitions, preview and edit different layers, or even create responsive websites from a file. If you're creative, sometimes a mousedown may not be fast enough. And when you need to quickly select a rectangular area of pixels, Photoshop has a new feature called "Pinch to Zoom." It allows you to quickly zoom into your image to select an area. There is also eye dropper, which allows you to extract the original image's color from any part of the image. Adobe finally answered the prayers of many artists by launching Photoshop Camera Raw. Photoshop Camera Raw is advanced raw processing that allows you to rapidly enjoy all the RAW benefits that come with advanced imaging software. Plus, it comes with Adobe's industry-leading image manipulations. You can enhance, modify, and convert your RAW files to fit your artistic and creative vision.
