Adobe Photoshop has been the most well-known software for graphic design. It allows users to create anything from photo retouching and editing to web graphics. Photoshop had a huge impact and changed the world of interactive i-design. At the same time, the demand for new features is even higher and Photoshop with its still virtually unlimited possibilities is also a challenge. The features are constantly added to the best of the professional version and the update version. Despite the latest features and design changes, the tools are easy to handle. The most significant changes in Photoshop for the last decade came with the Expression in 2007, followed by Catalogue in 2010 and Camera RAW in 2012. The market dynamics around the modern tools is not easy to measure and compare how fast Adobe's products sell and how many people use these tools today. With the transition to new APIs and increased hardware requirements, the costs of Adobe tools rise. The demand for functions and features in Adobe software is often higher. It also seems to be a trend that the more popular software is used, the more expensive is the tool. This is most clearly visible with the latest releases of Lightroom and Premiere Pro which do not have the same feature sets as previous versions. In Adobe's own world, sales still are going strong, and it's not a question of whether the software works, but how many people are using it and what their needs are. In the end, Photoshop is about efficiency and speed. It enables everyone to creatively express themselves. Adobe's products are even more popular today than ever before. Photoshop is the best software for creative rich designs and the most advanced software used by professional designers.
