JWM is a great lightweight window manager. It is an open source, Java-based window manager that can be used to create a powerful window manager or desktop environment. JWM is a window manager that can run on any operating system, including Windows, Linux, BSD, Mac OS X, and many others. JWM is considered a window manager, since it provides window controls and such. Overlapping sliders let you adjust the strength of the filter—positioning it is as easy as dragging the slider to the left or right. There's also a pop-up menu that lets you decide if you wish to keep the filter "on top" or "on bottom." The more complicated filters require you to add white (transparency) in the areas you wish to make invisible. In other Lightroom 5 areas, things are looking much better. As a long-time I was already familiar with the new iOS app and use the app myself on my iPhone. I wrote about its improvements , but I never followed its development during last year's R&D testing. Now, that has changed, and I would use it only for Lightroom now, given the new "More from Around the House" feature (more on that in a moment). I won't bore you with all the new options in Lightroom. Rather, I would like to talk about its performance, as it is been silently improved as well. It is not as if Lightroom is the slowest of all image editors. On the contrary, it is quite fast, but I must say that it does feel a little skittish when handling large numbers of images, which are common in Sony's' CSC aperture camera. It is easy to get good results with Lightroom. It has millions of customers and millions of creatives, but it could use some work when it comes to handling large numbers of images. Adobe also adds a new tool to the mobile editing workflow: the Import Image from Camera Raw (beta). Apart from being promised with Swift improvements, this is one of my favourite tools from Lightroom. Importing is one of the easiest ways to merge an image from a device that would otherwise be incompatible with Lightroom, and it is one of my favourite choices as well. The convenience of that feature is they are one and the same. Nothing has to be learned. It is just a matter of clicking Import, than entering some setup information (such as which Camera Raw profile should be used) and then adding photos. It is even easier to manage, given that the auto-importing feature, like every other one in Lightroom is smart with what it does. It also makes no sense to add a few photos in the mobile app. After all, it isn't really about the mobile app, is it? The new layer support on iPhone is nice, so that you can organize imported images before switching between them. Of course, you can still import images with Lightroom, though I do think it would

have been better to allow the uploading of large RAW files as well. Thus, one less step and the bump in the UI usability. But only if that works for you, of course. They are only a few challenges being met by Adobe that I thought of during this series. Let me know what you think, either in the comments below or by tweeting to @dcramon .
